Thanks to assistive technology (AT), opportunities for improving communication and relationships are expanding for children with social/emotional challenges.

There are thousands of devices and programs (apps) designed to aid communication, teach life skills, improve academic and social learning, and reduce frustrations that can lead to destructive behaviors. Games, in particular, are a great way to engage children with others and the world around them.

We’ve listed a few popular apps below, as well as links to more listings and AT funding resources. No one app or device fits all, so be sure to research and ask around.

**[POPULAR APPS]**

**Camp Discovery (FREE)**
Developed by the Center for Autism and Related Disorders (CARD), Camp Discovery is a suite of games that create fun learning opportunities for children with autism.
www.campdiscoveryforautism.com

**First Then Visual Schedule** ($9.99-$14.99)
Helps children use and follow schedules. Choose possible rewards for completed activities. www.commonsensemedia.org

**Learn with Rufus: Feelings and Emotions** ($4.99)
Helps children learn the facial expressions that correspond to feelings and emotions. www.rufusrobot.com/emotions.php

**Meet Heckerty (FREE)**
Heckerty finds the world confusing and makes mistakes (as we all do). Teaches reading and vocabulary, inclusiveness, caring and loyalty. www.heckerty.com

**Proloquo2Go** ($249.99)
Symbol-supported communication app to promote language development and grow communication skills.
www.assistiveware.com/product/proloquo2go

---

Autistics can be successful the way we are. We just have a different style brain and learning style. Video games are a great way for autistic people to learn how play with others. I learned turn-taking by playing video games with my sister. I have had hard time being social when I can’t be myself. When I was able to be myself, I became more social and started liking being around people. —Ivanova Smith, Advocate
